What is an IPL?

Intense Pulsed Light™ (IPL) skin IPL is the gold standard for photorejuvenation. This FDA-cleared, patented technology provides dramatic results for a variety of benign conditions, including age spots, sun-induced freckles, symptoms of rosacea, birthmarks, unsightly veins, acne scarring and other blemishes even unwanted hair. Laser resurfacing and deep chemical peels often send patients into hiding, as they wait for redness and swelling to subside. Microdermabrasion addresses skin irregularities, but is not effective against all complexion problems including redness, flushing and broken capillaries. Face lifts and other surgical procedures are far too invasive for younger patients and "baby boomers" who simply want to revitalize their appearance without recovery downtime.

Benefits from IPL:

- ✿ Improve appearance of aging or sun damage skin (fine wrinkles, freckles, pigmentation)
- ✿ Smoothen skin and reduce pore size
- ✿ Improve skin tone or lightness
- Reduce redness, flushing or Rosacea
- ✿ No recovery time

Red blemishes from broken blood vessels and brown spots of pigment from sun damage respond to Intense Pulsed Light. The light is changed to heat energy as it reaches to the level of the collagen beneath the skin surface.

Adults over 60 should get shingles vaccine

CDC recommends

If you've ever had chickenpox, you could get Shingles now.

Shingles is a painful, blistering rash. Shingles is caused by the same virus that causes chickenpox.

Once you have had chickenpox, the virus stays in your body and can resurface as Shingles. The Shingles rash usually lasts up to 30 days, and for most the pain lessens as the rash heals. But some people who develop Shingles experience long-term pain that can last for months, even years.

USA Today reports, "Everyone over 60 should be vaccinated against shingles, the Centers for Disease Control and Prevention recommends. Nearly one out of three people in the USA will develop shingles, a painful

and potentially serious condition also known as herpes zoster." Despite that fact, "only 10% of those 60 and older -- the group most at risk for shingles -- got the shingles vaccine (Zostavax) in 2009."

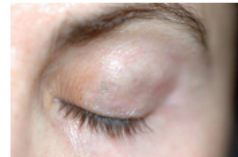

ZOSTAVAX is a vaccine that can help prevent shingles in adults 60 years of age or older. FDA-approved ZOSTAVAX is used to help prevent Shingles in adults 60 years of age or older. Once you reach age 60, the sooner you get vaccinated, the better your chances of protecting yourself from Shingles. The Shingles Vaccine is covered by some, but not all insurance companies.

Your doctors at Total Skin & Beauty can decide if ZOSTAVAX is right for you.
